Carrot promoter sequence 18-AUG-2000 AAA37959 standard; DNA; 2052 (SUMO ) SUMITOMO CHEM CO LTD. (first entry) Oeda K; 98JP-00281124. 99WO-JP005303. #1. ΒP

This sequence represents a carrot promoter. The invention relates to plant promoters and terminators from Daucus carota L. which are capable of expressing a gene of interest in plants. The invention also includes a chimeric gene characterized in that it comprises the promoter and a desired gene linked to each other in the form capable of functioning. A method of producing a transformant comprises introducing the promoter, the chimeric gene or a vector comprising the promoter and a desired gene or a vector comprising the promoter and a desired gene or terminator sequence into a host cell. The plant promoters and terminators are useful in plant breeding, for e.g. fertilities of plants may be controlled by expressing, in the host cells, a sense or antisense

New Plant promoters and terminators from Daucus carota  $L_{\cdot,\cdot}$  useful plant breeding, for e.g. controlling fertilities of plants.

                                                                                                                                                                                                                                                                                                                                      This sequence represents a carrot promoter. The invention relates to plant promoters and terminators from Daucus carota L. which are capable of expressing a gene of interest in plants. The invention also includes a chimeric gene characterized in that it comprises the promoter and a desired gene linked to each other in the form capable of functioning. A method of producing a transformant comprises introducing the promoter, the chimeric gene or a vector comprising the promoter and a desired gene or terminator sequence into a host cell. The plant promoters and terminators are useful in plant breeding, for e.g. fertilities of plants may be controlled by expressing, in the host cells, a sense or antisense gene of a male sterility related gene such as S-locus-specific RNase gene

                                                                         This sequence represents a plasmid sequence used in a method for introducing a mutation into a carrot promoter. The invention relates to plant promoters and terminators from Daucus carota L. which are capable of expressing a gene of interest in plants. The invention also includes a desired gene characterized in that it comprises the promoter and a method of producing a transformant comprises introducing. A the chimeric gene or a vector comprises introducing the promoter, or terminator sequence into a host cell. The plant promoters and terminators are useful in plant breeding, for e.g. fertilities of plants gene of a male sterility related gene such as S-locus-specific RNase gene

28-SEP-1999;

This sequence represents a plasmid sequence used in a method for introducing a mutation into a carrot promoter. The invention relates to plant promoters and terminators from Daucus carota L. which are capable of expressing a gene of interest in plants. The invention also includes a chimeric gene characterized in that it comprises the promoter and a desired gene linked to each other in the form capable of functioning. A method of producing a transformant comprises introducing the promoter, the chimeric gene or a vector comprising the promoter and a desired gene or terminator sequence into a host cell. The plant promoters and terminators are useful in plant breeding, for e.g. fertilities of plants may be controlled by expressing, in the host cells, a sense or antisense gene of a male sterility related gene such as S-locus-specific RNase gene RNase gene 9

                                                           New promoter used for root-specific expression in plants
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present sequence represents a novel promoter, and is isolated from the roots of carrots, cultivar Kuroda Gosun. The promoter can be used t direct root-specific expression in plant cells. Since the promoter enables expression of a desired protein in the roots of a plant, it is useful in combat against pathogenic soil fungi and pests which are difficult to kill by chemicals. It can also be used to improve the nutritive value of edible root plants
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence 2042 BP; 719 A; 356 C; 323 G; 644 T; 0 U; 0 Other;

The promoter can be used to direct root-specific expression in plant cells. Since the promoter enables expression of a desired protein in the rod specific tissusseful in combat against pathogenic soil fungi and pests which are difficult to kill by chemicals. It can also be used to improve the nutritive value of edible root plants
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present sequence represents a novel promoter, and is isolated from
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New carrot root gene, promoter and terminator - useful in engineering for directing root-specific gene expression.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        WPI; 1998-122310/12.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present sequence is a CR16.3 fragment from carrot genomic DNA. It is used for synthesis of a plant promoter which comprises nucleotides 112-246, 54-246, or 1-246 of this sequence and a synthetic DNA. The promoter is used for controlling the expression of a desired gene e.g. soybean glycinin, stearoyl-ACP-desaturase and S-locus type specific RNase gene (male sterility-related gene) in a host cell especially a microorganism or a plant cell. The transformed plant cells can be used to produce transgenic plants. The promoter is compact and therefore suitable for higher expression of a desired gene in a particular tissue compared to the promoter transgenic plants.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to an expression inducing promoter comprising a first DNA linked to a second DNA at its 5' terminus, where the first DNA has a region which determines a transcription start point of RNA polymerase II and has minimum promoter function, and the second DNA has expression inducing promoter function in a plant cell. The expression inducing promoter is useful for expressing a foreign gene. This sequence represents carrot DNA used in the scope of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Disclosure; SEQ ID NO 4; 61pp; Japanese

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          This invention relates to carrot DNA used as an expression inducer type promoter. Specifically, it refers to promoter sequences derived from plant DNA, preferably carrot, and functional mutants thereof that can be used as expression inducers. Furthermore, the present invention describe DNA, vectors, transformants and the process by which to prepare transformants. This polymucleotide sequence is the DNA encoding the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       This invention relates to promoter.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Query Match
The present sequence is an oligonucleotide (- chain) used to prepare a CR16.1 DNA fragment comprising nucleotides 112-246 of the carrot CR16.3 fragment. The CR16.1 DNA fragment is ligated to a 10 bp synthetic DNA for construction of a plant promoter. The promoter is used for controlling the expression of a desired gene e.g. soybean glycinin, stearoyl-ACP-desaturase and S-locus type specific RNase gene (male sterility-related gene) in a host cell especially a microorganism or a plant cell. The promoter is compact and therefore suitable for higher expression of a

                                  The present sequence is an oligonucleotide (+ chain) used to prepare a CR16.1 DNA fragment comprising nucleotides 112-246 of the carrot CR16.3 fragment. The CR16.1 DNA fragment is ligated to a 10 bp synthetic DNA for construction of a plant promoter. The promoter is used for controlling the expression of a desired gene e.g. soybean glycinin, stearcyl-ACP-desaturase and S-locus type specific RNase gene (male sterility-related gene) in a host cell especially a microorganism or a plant cell. The transformed plant cells can be used to produce transgenic plants. The promoter is compact and therefore suitable for higher expression of a promoter is compact and therefore suitable for higher expression of a

which distinguishes between methylated and non-methylated CpG dinucleotides within the target nucleic acid. ABZ09861 to ABZ1118 crepresent specifically claimed nucleotide sequences from the present creation. Oligonucleotides from the present invention can be used: for differentiating between healthy haematopoietic cells and proliferative clisorder haematopoietic cells; for differentiating between acute [CC] lymphocytic leukaemia and acute myelogenous leukaemia; as probes for determining the cytosine methylation state and/or single nucleotide collymorphisms (SNPs) of haematopoietic cell proliferation disorder crelated sequences and their complements; and as primers for the amplification of haematopoietic cell proliferation disorder related sequences. The nucleotide sequences from the present invention can also be used for detecting a predisposition to, differentiation between subclasses, diagnosis, prognosis, treatment and/or monitoring of haematopoietic cell proliferative disorders. The present method enables a highly specific classification of haematopoietic cell proliferative
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               differentiating between haematopoietic cell proliferative disorders associated with at least 1 gene and/or their regulatory regions in a subject. The method comprises contacting a target nucleic acid in a biological sample obtained from the subject with at least 1 reagent,
disorders allowing for improved and informed treatment of patients
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ín a

REFERENCE AUTHORS TITLE RESULT 1 CNS00EVL/c ORIGIN SOURCE ORGANISM FEATURES COMMENT KEYWORDS VERSION DEFINITION ACCESSION JOURNAL source Determination of this BAC-end sequence was carried out as part of a collaboration with the Berkeley Drosophila Genome Project (BDGP). The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Osoegawa and Marron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial EcoRI digestion of Drosophila DNA provided by the BDGP from the isogenic strain y2; cn bw sp, the same strain used for the BDGP's Pl and EST libraries. A more detailed description of the library and how to order individual BAC clones, the entire library, or filters for hybridization from the BACPAC Resource Center can be found at http://bacpac.med.buffalo.edu/drosophila\_bac.htm. fly), ger AL069706 CNSODEVL 1101 bp DNA linear GSS 04-JUN-1999 Drosophila melanogaster genome survey sequence T7 end of BAC: BACR29B23 of RPCI-98 library from Drosophila melanogaster (fruit Eukaryota; Metazoa; Arthropoda; Hexapoda; Insecta; Pterygota; Neoptera; Endopterygota; Diptera; Brachycera; Muscomorpha; Ephydroidea; Drosophilidae; Drosophila.                                                                                                                                                                                              Determination of this BAC-end sequence was carried out as part of collaboration with the Berkeley Drosophila Genome Project (BBGP). The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by kazutoyo Osoegawa and melanogaster BAC library was prepared by kazutoyo Osoegawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial EcoRI digestion of Drosophila DNA provided by the BDGP from the isogenic strain y2; on bw sp, the same strain used for the BDGP's plant EST libraries. A more detailed description of the library
                                                                                                                              and how to order individual BAC clones, the entire library, or filters for hybridization from the BACPAC Resource Center can be found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.

The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Osoegawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial EcoRI digestion of Drosophila NAM provided by the BDGP from the isogenic strain y2; on bw sp. the same strain used for the BDGP's pl and EST libraries. A more detailed description of the library and how to order individual BAC clones, the entire library, or filters for hybridization from the BACPAC Resource Center can be found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.

Determination of this BAC-end sequence was carried out as part collaboration with the Berkeley Drosophila Genome Project (BDG)
The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Osoegawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department
